

# IQBAL FANOSA WIOTAMA

AI Training & Data Annotation Specialist | Data Verification Professional

Bangko, Merangin, Jambi, Indonesia | iqbalfw00@gmail.com | 081330145160 | <https://iqbalfw00.github.io/porto/>

## PROFESSIONAL PROFILE

---

Informatics Engineering graduate (Universitas Sriwijaya) with hands-on, production-scale experience verifying and validating large national datasets, combined with active use of AI tools, prompt engineering, and AI-assisted development in daily technical work. Accustomed to processing high-volume operational data with strict accuracy standards, annotating and cross-checking records against defined criteria, and coordinating data-driven field operations under tight deadlines. Bilingual in Indonesian (native) and professional-level English, with a practical technical foundation in Python, Pandas, Git/GitHub, and structured data tools — well-suited for AI training, data annotation, and model output quality evaluation work.

## AI TRAINING & DATA SKILLS

---

- **Data Verification & Validation:** large-scale, high-accuracy verification of national datasets — directly transferable to reviewing, checking, and validating AI training data or model outputs against defined guidelines.
- **Annotation Accuracy & Consistency:** trained to apply consistent standards across high-volume data processing, minimizing error rate — core to reliable data labeling and annotation work.
- **Rubric-Based Review & Pattern Reporting:** self-built QA workflow simulation applying a written rubric across sample review tasks, distinguishing genuine errors from ambiguous source material, and rolling results into a recurring-pattern report with recommendations.
- **AI Usage & Prompt Engineering:** regular, practical use of AI tools (including analytical AI) for daily tasks — crafting effective prompts, evaluating output quality, and iterating on responses.
- **AI-Assisted Development:** experience integrating AI into software development workflows (coding, debugging, documentation), giving practical insight into how models respond to instructions and where output errors or bias can appear.
- **Programming & Data Tools:** working knowledge of Python and Pandas for data processing, Git/GitHub for version control, and Chrome Extension API.
- **Structured Data Handling:** proficient in Excel (formulas, tables, stock/data recap) and Google Workspace (Docs, Sheets, Drive, Forms) for organized, traceable data management.
- **Bilingual Proficiency (ID/EN):** native Indonesian speaker with professional-level English (academic & technical), suited for annotation, response-quality evaluation, and cross-lingual review tasks.
- **Precision Under Deadline Pressure:** proven ability to maintain data quality and accuracy while operating under strict timelines and high-volume workloads.

## WORK EXPERIENCE & ORGANIZATIONAL BACKGROUND

---

### Data Verification Staff & Field Coordinator

2026 – Present · Project-based

Perum BULOG — National Food Assistance Program (State-Owned Enterprise)

- Verified and validated large-scale national beneficiary data with a high standard of accuracy, applying consistent criteria across high data volumes — directly analogous to dataset QA and annotation review.
- Coordinated field teams during physical goods distribution, ensuring accuracy in quantity, targeting, and operational flow — reinforcing precision and attention to detail under real-world constraints.
- Managed data administration and prepared periodic reports to management using internal enterprise systems.

### Data Management Intern

2022 · 1 Month

PT Telkom Indonesia — Data Management Division, Palembang

- Supported management, recording, and maintenance of internal data for a national-scale telecommunications company.
- Gained direct exposure to corporate data governance standards and cross-team data workflows.

### Chairperson, Faculty Election Commission (KPU Fasilkom)

2021

Universitas Sriwijaya — Faculty of Computer Science

- Led planning and implementation of Fasilkom UNSRI's first online student election system.
- Managed administration and documentation across the full project lifecycle: mechanism design, team coordination, system testing, and execution.

### Special Staff, Extracurricular Oversight

2020 – 2021

DPM Fasilkom — Student Representative Council

- Oversaw operational compliance of student activity units at the faculty level, including event execution and budget/inventory use.
- Conducted audits, evaluations, and periodic reporting on activity reports and financial accountability.

### Student Exchange Participant — Mobile Developer

2022 · 1 Semester (Online)

Universiti Sultan Zainal Abidin (UniSZA), Malaysia

- Completed a cross-border academic exchange program focused on Mobile Development coursework.
- Adapted to an English-language international academic environment with a different evaluation system.

## RELEVANT PROJECTS (PRECISION & DATA-HANDLING FOCUS)

---

### Annotation QA Showcase — Rubric-Based Review Simulation

Completed · GitHub

**Stack:** Markdown documentation, structured rubric design, mock source-image review set

- Built a self-contained simulation of the review workflow used in AI data-annotation and QC roles: reviewing trainer-submitted "golden" answers against source images using a fixed, written rubric defined before looking at any individual case.
- Authored a RUBRIC.md defining decision categories, rule order, and reporting standard up front, then applied it consistently across 16 sample review tasks (REVIEW\_LOG.md), each logged with a decision and a one-sentence evidence-based justification.
- Practiced distinguishing genuine annotator mistakes from cases where the source material itself was ambiguous — a core judgment call in real annotation QC work, not just "spot the wrong answer."
- Produced a PATTERN\_REPORT.md rolling individual reviews into recurring-error analysis versus one-off mistakes, with an actionable recommendation for each pattern, mirroring how QC feedback is reported back to a labeling team.
- Used four mock source screenshots (file explorer, spreadsheet, document viewer, calendar) as review material, keeping the project small and process-focused rather than a large dataset dump.

### Roblox Audio Auto-Mastering v15 — Per-Item Identity Analysis & Consistency Engine

Completed · Deployed

**Stack:** Python, NumPy, SciPy, FFmpeg, Tkinter (GUI + CLI)

- Built a 4-pass DSP engine that analyzes each audio file's own tonal, dynamic, spatial, and temporal identity before processing — an item-by-item evaluation approach rather than one fixed rule applied blindly, mirroring how annotation work must judge each item against context rather than a single rigid template.
- Designed a rubric-like verification pass (Identity Anchor Check, Translation Insurance, Perceptual Loudness Optimization) that selectively rolls back changes if an output drifts from the item's original identity — directly analogous to flagging and correcting annotation outputs that violate defined guidelines.
- Implemented a Coherence Score (0–1) combining five weighted sub-metrics to quantify output quality consistently across a batch, then validated it against a real batch run showing a 99/100 consistency result with  $\pm 0.03$  dB loudness spread across files.
- Deployed the tool as a public Hugging Face Spaces web app (Gradio interface) for portfolio and hands-on demonstration purposes.

### AudioGrab — Batch Audio Retrieval Tool with Metadata & Naming Validation

Completed · GitHub

**Stack:** Python, FastAPI, JavaScript (Chrome Extension, Manifest V3), yt-dlp, CustomTkinter

- Built a two-layer pipeline (Chrome extension + local FastAPI backend) that batch-processes audio downloads while enforcing a strict, consistent file-naming and metadata convention across every output — directly analogous to applying a fixed labeling rubric across many items.
- Implemented error classification (retryable vs. permanent) with exponential backoff in the download queue, so malformed or failed items are automatically flagged and retried instead of silently producing bad output — the same discipline required in QA-checking large annotation batches.

- Iteratively redesigned the naming schema after auditing real output for inconsistencies, reflecting a guideline-refinement process similar to annotation-rubric iteration.

### **Overhead UI & Interface Consistency System — Roblox Production Game**

*Completed · Deployed*

**Stack:** Lua, Roblox Studio

- Redesigned and QA'd a multi-element overhead UI (role tag, username, level) across iterative versions, testing for visual consistency, text overflow, and scaling errors across many screen sizes — a direct parallel to reviewing image or UI-based annotation tasks for correctness.
- Debugged a dual-output leaderboard system using an additive-only, non-destructive approach to avoid breaking existing live behavior, reflecting careful, guideline-respecting correction of an existing system rather than a full rewrite.

### **Ombak Sunset Party — Audio-Reactive Social Simulation (Solo Developer)**

*Completed · Deployed*

**Stack:** Lua, Roblox Studio, Roblox Developer Products, custom audio-analysis pipeline

- Solo-developed and shipped a roughly 35,000-line production codebase, specifying and implementing a full system architecture across 7 dependency layers (audio analysis, environmental effects, security, admin, economy, social systems, auxiliary) — a rubric-first, define-the-standard-before-building-it approach.
- Designed and deployed a Temporal Pattern Recognition system that classifies live music into structural categories (intro, verse, chorus, drop, build-up) from amplitude data alone, using rule-based thresholds and derivative analysis rather than true frequency decomposition - directly comparable to building and applying a classification rubric consistently across many inputs.
- Built and integrated 16-plus interdependent modules (lighting choreography, smoke dynamics, VIP and economy systems, donation tiers, admin moderation panel, anti-exploit safeguards) with explicit inputs, outputs, and dependency mapping between modules, keeping a large solo-built system internally consistent end to end.
- Enforced detailed acceptance criteria and safety bounds for every module (e.g., FPS targets, chaos-parameter ranges, content-moderation rules), validating implementation against a fixed written standard rather than subjective judgment.
- Delivered the project through a full 6-phase production cycle (foundation, audio/TPR, environmental systems, social/economy, admin/polish, testing/launch), reflecting structured project planning and iterative scope refinement under a solo-developer constraint.

## **EDUCATION**

---

### **B.Eng. in Informatics Engineering**

*Graduated 2025*

*Universitas Sriwijaya (UNSRI), Palembang*

- GPA: 3.63 / 4.00
- International exchange program: UniSZA Malaysia — Mobile Developer (2022)

## **ADDITIONAL SKILLS**

---

- **Tools & Platforms:** Microsoft Excel, Git & GitHub, Chrome Extension API, AI/LLM tools for prompting and AI-assisted development.
- **Data & Administration:** Pandas (basic), digital archiving, operational data recap and reporting.
- **Soft Skills:** project leadership, cross-functional team coordination, budget/inventory management, administrative precision, field discipline.
- **Languages:** Indonesian (Native), English (Professional — Academic & Technical).
